DETAILED ACTION

Allowable Subject Matter

1. Claims 1 – 27, 35 and 36 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claims 1 – 26 recite, inter alia, a process for producing photoluminescent silicon nanoparticles comprising reacting a silicon precursor in the presence of a sheath gas with heat from a radiation beam under conditions effective to produce silicon nanoparticles and acid etching the silicon nanoparticles under conditions effective to produce photoluminescent silicon nanoparticles. The art of record does not disclose or anticipate the above limitation in combination with other claim elements nor would it be obvious to modify the art of record so as to form a device including the above limitation.

Claim 27 recites, inter alia, a process for producing photoluminescent silicon nanoparticles comprising thermally decomposing a silicon precursor in the presence of a sheath gas with CO₂ laser radiation under conditions effective to produce silicon nanoparticles and acid etching the silicon nanoparticles with a hydrofluoric acid and nitric acid solution under conditions effective to produce photoluminescent silicon nanoparticles. The art of record does not disclose or anticipate the above limitation in combination with other claim elements nor would it be obvious to modify the art of record so as to form a device including the above limitation.

Claim 35 recites, inter alia, a process for stabilizing photoluminescence in silicon nanoparticles comprising treating photoluminescent silicon nanoparticles under conditions effective to produce photoluminescent silicon nanoparticles having a Si – H

terminated surface; and treating the Si – H surface – terminated nanoparticles under conditions effective to achieve particle surface hydrosilylation. The art of record does not disclose or anticipate the above limitation in combination with other claim elements nor would it be obvious to modify the art of record so as to form a device including the above limitation.

Claim 37 recites, inter alia, a process for stabilizing photoluminescence in silicon nanoparticles comprising treating photoluminescent silicon nanoparticles under conditions effective to produce photoluminescent silicon nanoparticles having a Si - OH terminated surface; and treating the Si- OH surface - terminated nanoparticles under conditions effective to achieve particle surface silanization. The art of record does not disclose or anticipate the above limitation in combination with other claim elements nor would it be obvious to modify the art of record so as to form a device including the above limitation.
